

Programming Skills Assessment

Use the attached Excel file to create a filterable Google Map and deploy on Github.

Requirements:

- All 1,500 properties must display on the map. Display the full address of the property in a hover window.
- The user must be able to filter by the values in any column. Categorical values should be in a dropdown, and for numeric values the user should be able to enter a min and max value to filter.
- Apply a color gradient to each point using the “estimated_market_value” column, lowest should be red, highest should be green.
- Style should be similar to Vue.js element framework: <https://element.eleme.io/#/en-US>
